

i>clicker 6 Software: Mac OSX and Windows PCs

How to transfer data from Mac OSX to Windows:

1. Start by putting a copy of the i>clicker software for both PC and Mac on your desktop.
2. Rename the iClicker Win folder to iclicker WinMac
3. Using a Mac, copy the i>clicker, i>grader, and WebUpdate application files from the i>clicker Mac folder to the iclicker WinMac folder you just created
4. If you're using i>clicker Integrate (i.e., students register directly within the LMS) also copy the CMS Integrate Wizard (.app) file from the Resources folder in i>clicker Mac to the Resources folder within iclicker WinMac.

Once you drag CMS Integrate Wizard.app over, your iclicker WinMac > Resources folder should contain exactly 8 items: CMS Integrate Wizard Libs, CMS Integrate Wizard.app, CMS Integrate Wizard.exe, CMS_Wizard.xml, Config.xml, Help_Master.xml, Seed_Demographics.xml, Web_Voting_Config.xml.

- Going forward, always use the WinMac folder
- Both applications will access the same data from your Classes folder.
